

DORNIER

T E C H N O L O G Y

COMPANY PROFILE

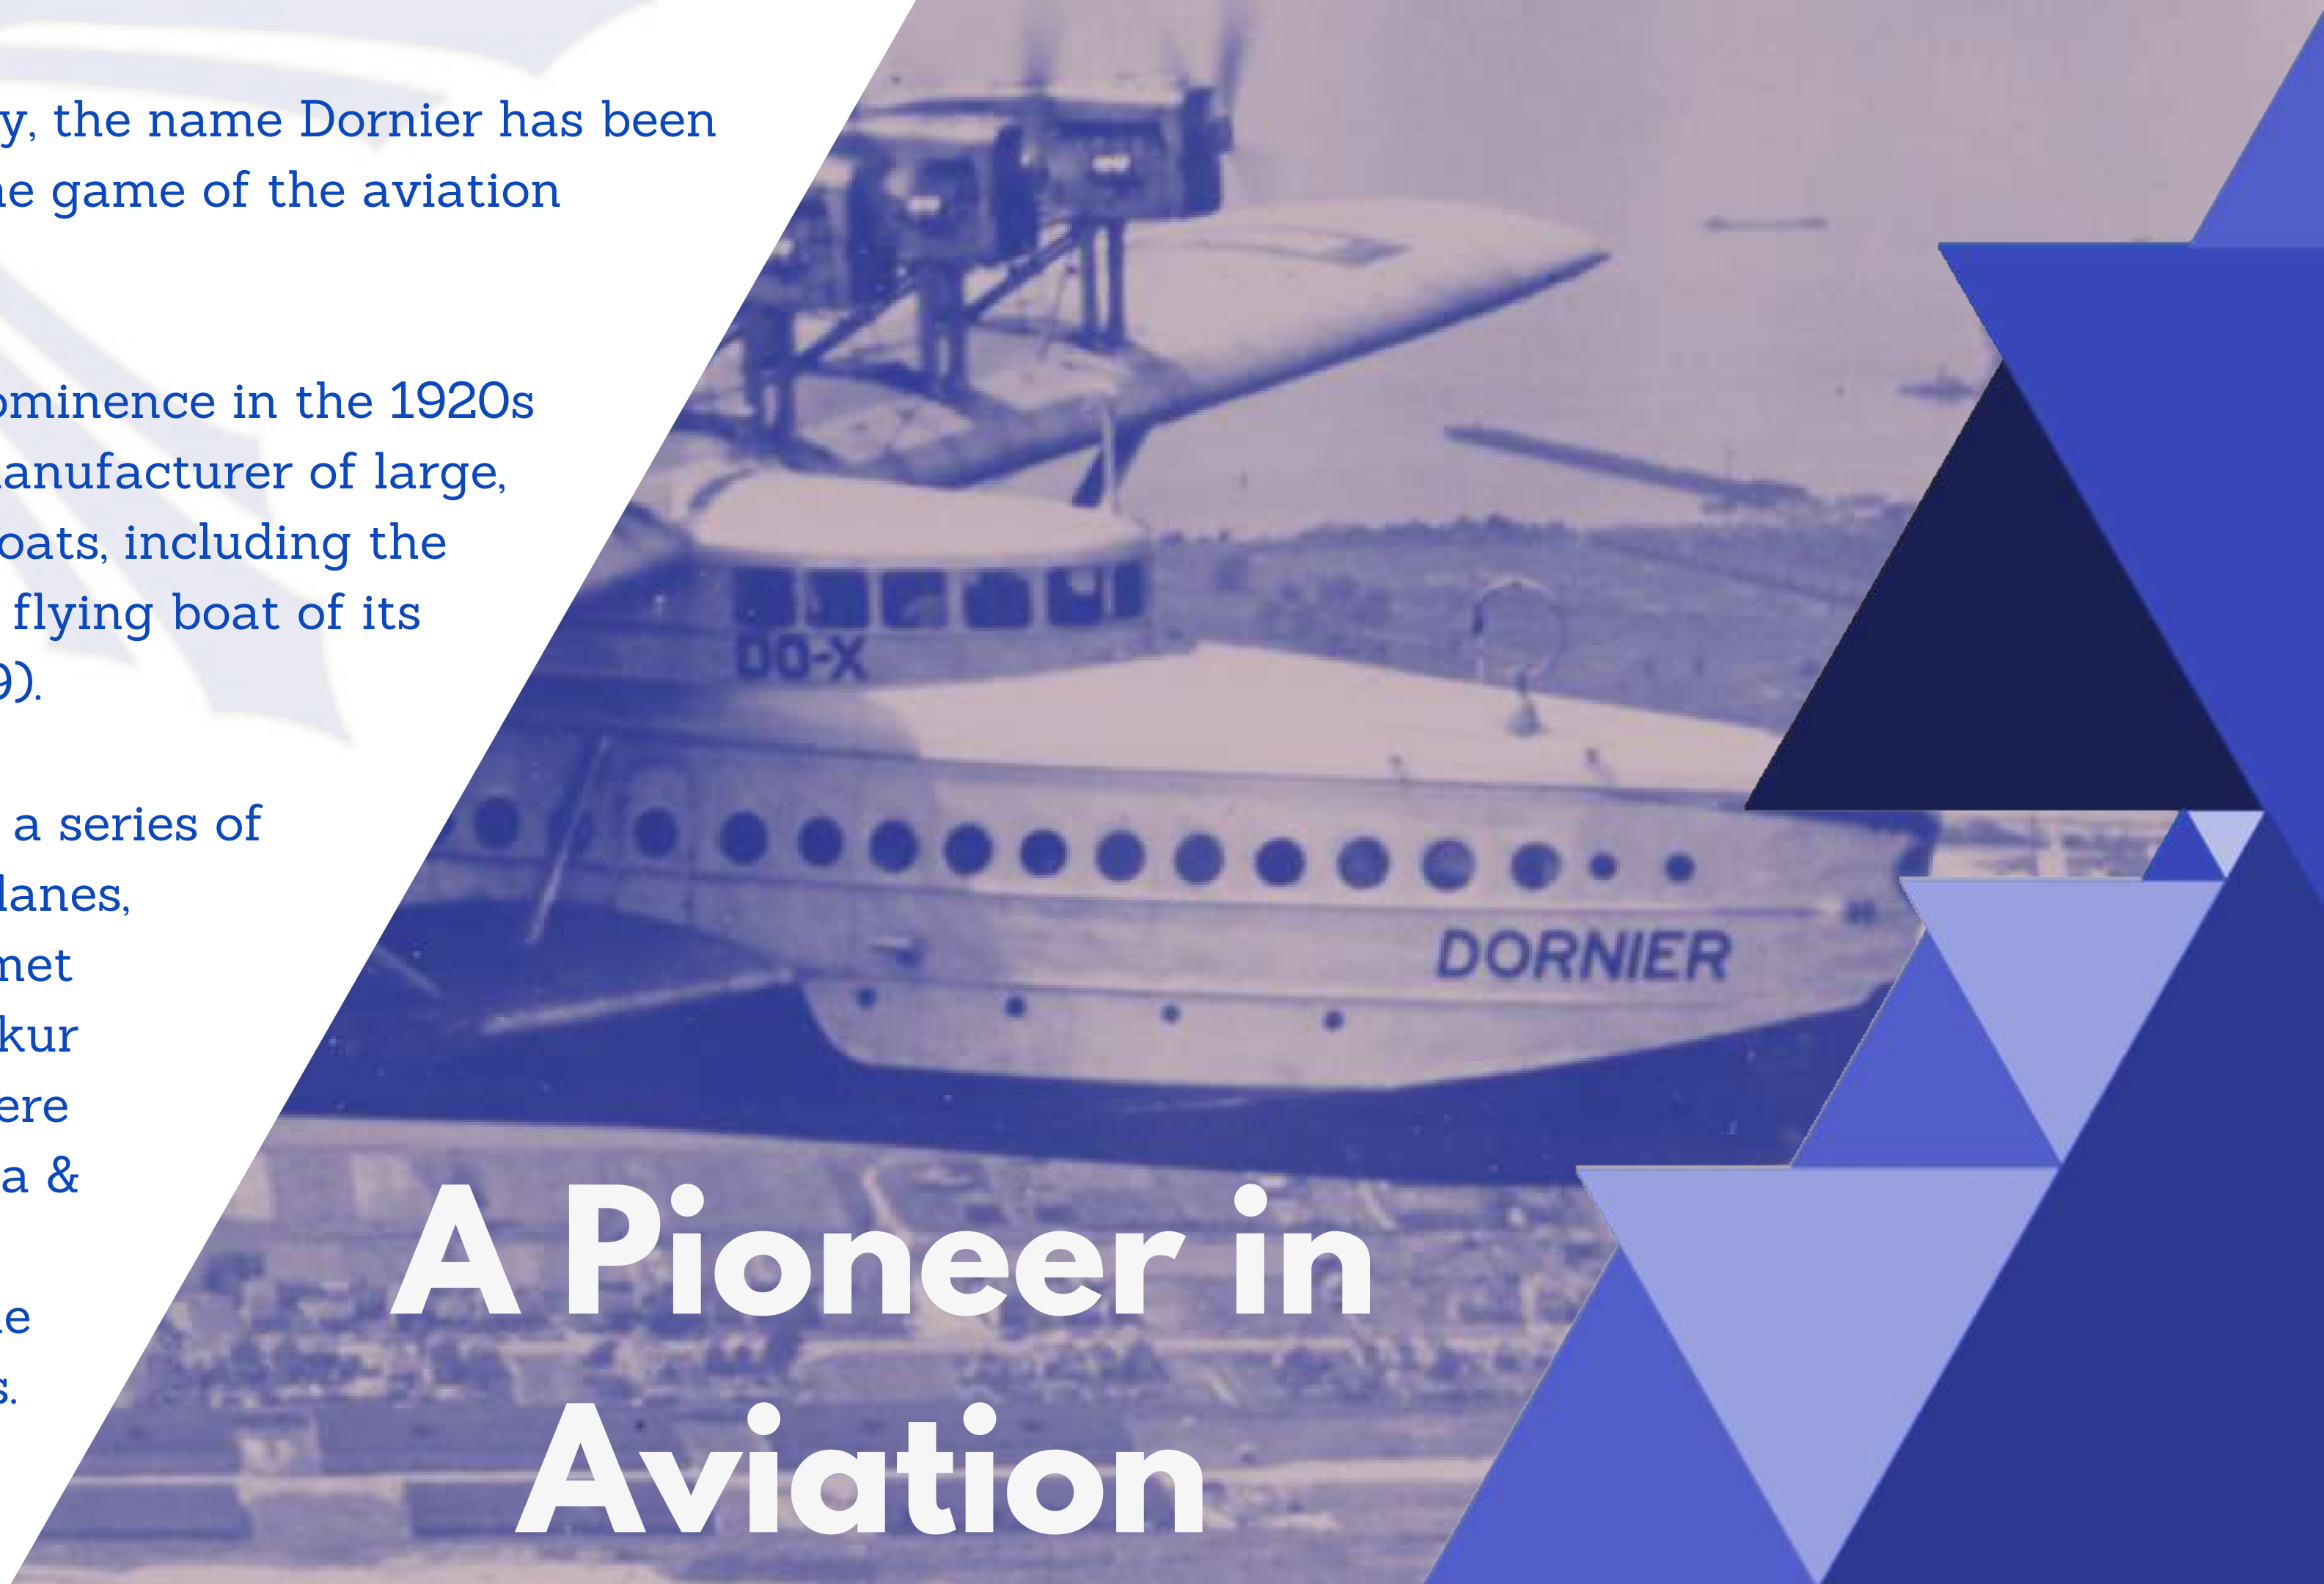

Comprehensive Aircraft Solutions
Tailored To Your Needs

For over a century, the name Dornier has been *revolutionizing* the game of the aviation industry.

It first rose to prominence in the 1920s and 1930s as a manufacturer of large, all-metal flying boats, including the Do X (the largest flying boat of its time back in 1929).

Dornier also built a series of *successful* land planes, including the Komet (Comet) and Merkur (Mercury) that were used by Lufthansa & other European carriers during the 1920s & early 30s.

A Pioneer in Aviation

The Dornier Legacy

Claude Dornier embarked on a world tour in 1930 on the Do X, an aircraft of his own design. 30 years later, another Dornier would take on the silver torch. After forever changing aviation in Germany, the legendary aviation name brought its brilliance to the Philippines.

A boy sat in the cockpit of his grandfather Claude's Do-24. That boy, Iren Dornier, dreamed of flying his own aircraft. In time, that dream would become reality.

Young Iren almost lost hope when the Do-24 aircraft was decommissioned, but he kept the dream and took a chance with the purchase of the Do-24ATT from the Deutsch Museum in 1998. Five years, ten thousand miles and nearly six million dollars later, he brought his treasured aircraft and its legacy back to life in the Philippines.

In 2004, Iren himself went on a world tour with UNICEF, flying the Do 24ATT. His mission was for spreading awareness, his message was for chasing one's dreams.

"The Flight of Dreams" raised \$61,000.00 for the education of Filipino youth.

Iren's route followed his grandfather's path all those years ago, in honor of his lifelong inspiration. Though the tour may have ended in 2005, Iren's inspiring journey continues as strong as ever.

Rooted in the past, Geared for the future

Dornier was founded in 2008, a spin-off from the maintenance arm of SEAIR, Inc., when the latter partnered with Tiger Airways Holdings, Inc. Ltd. to form Tiger Airways Philippines which was later acquired by CebGo.

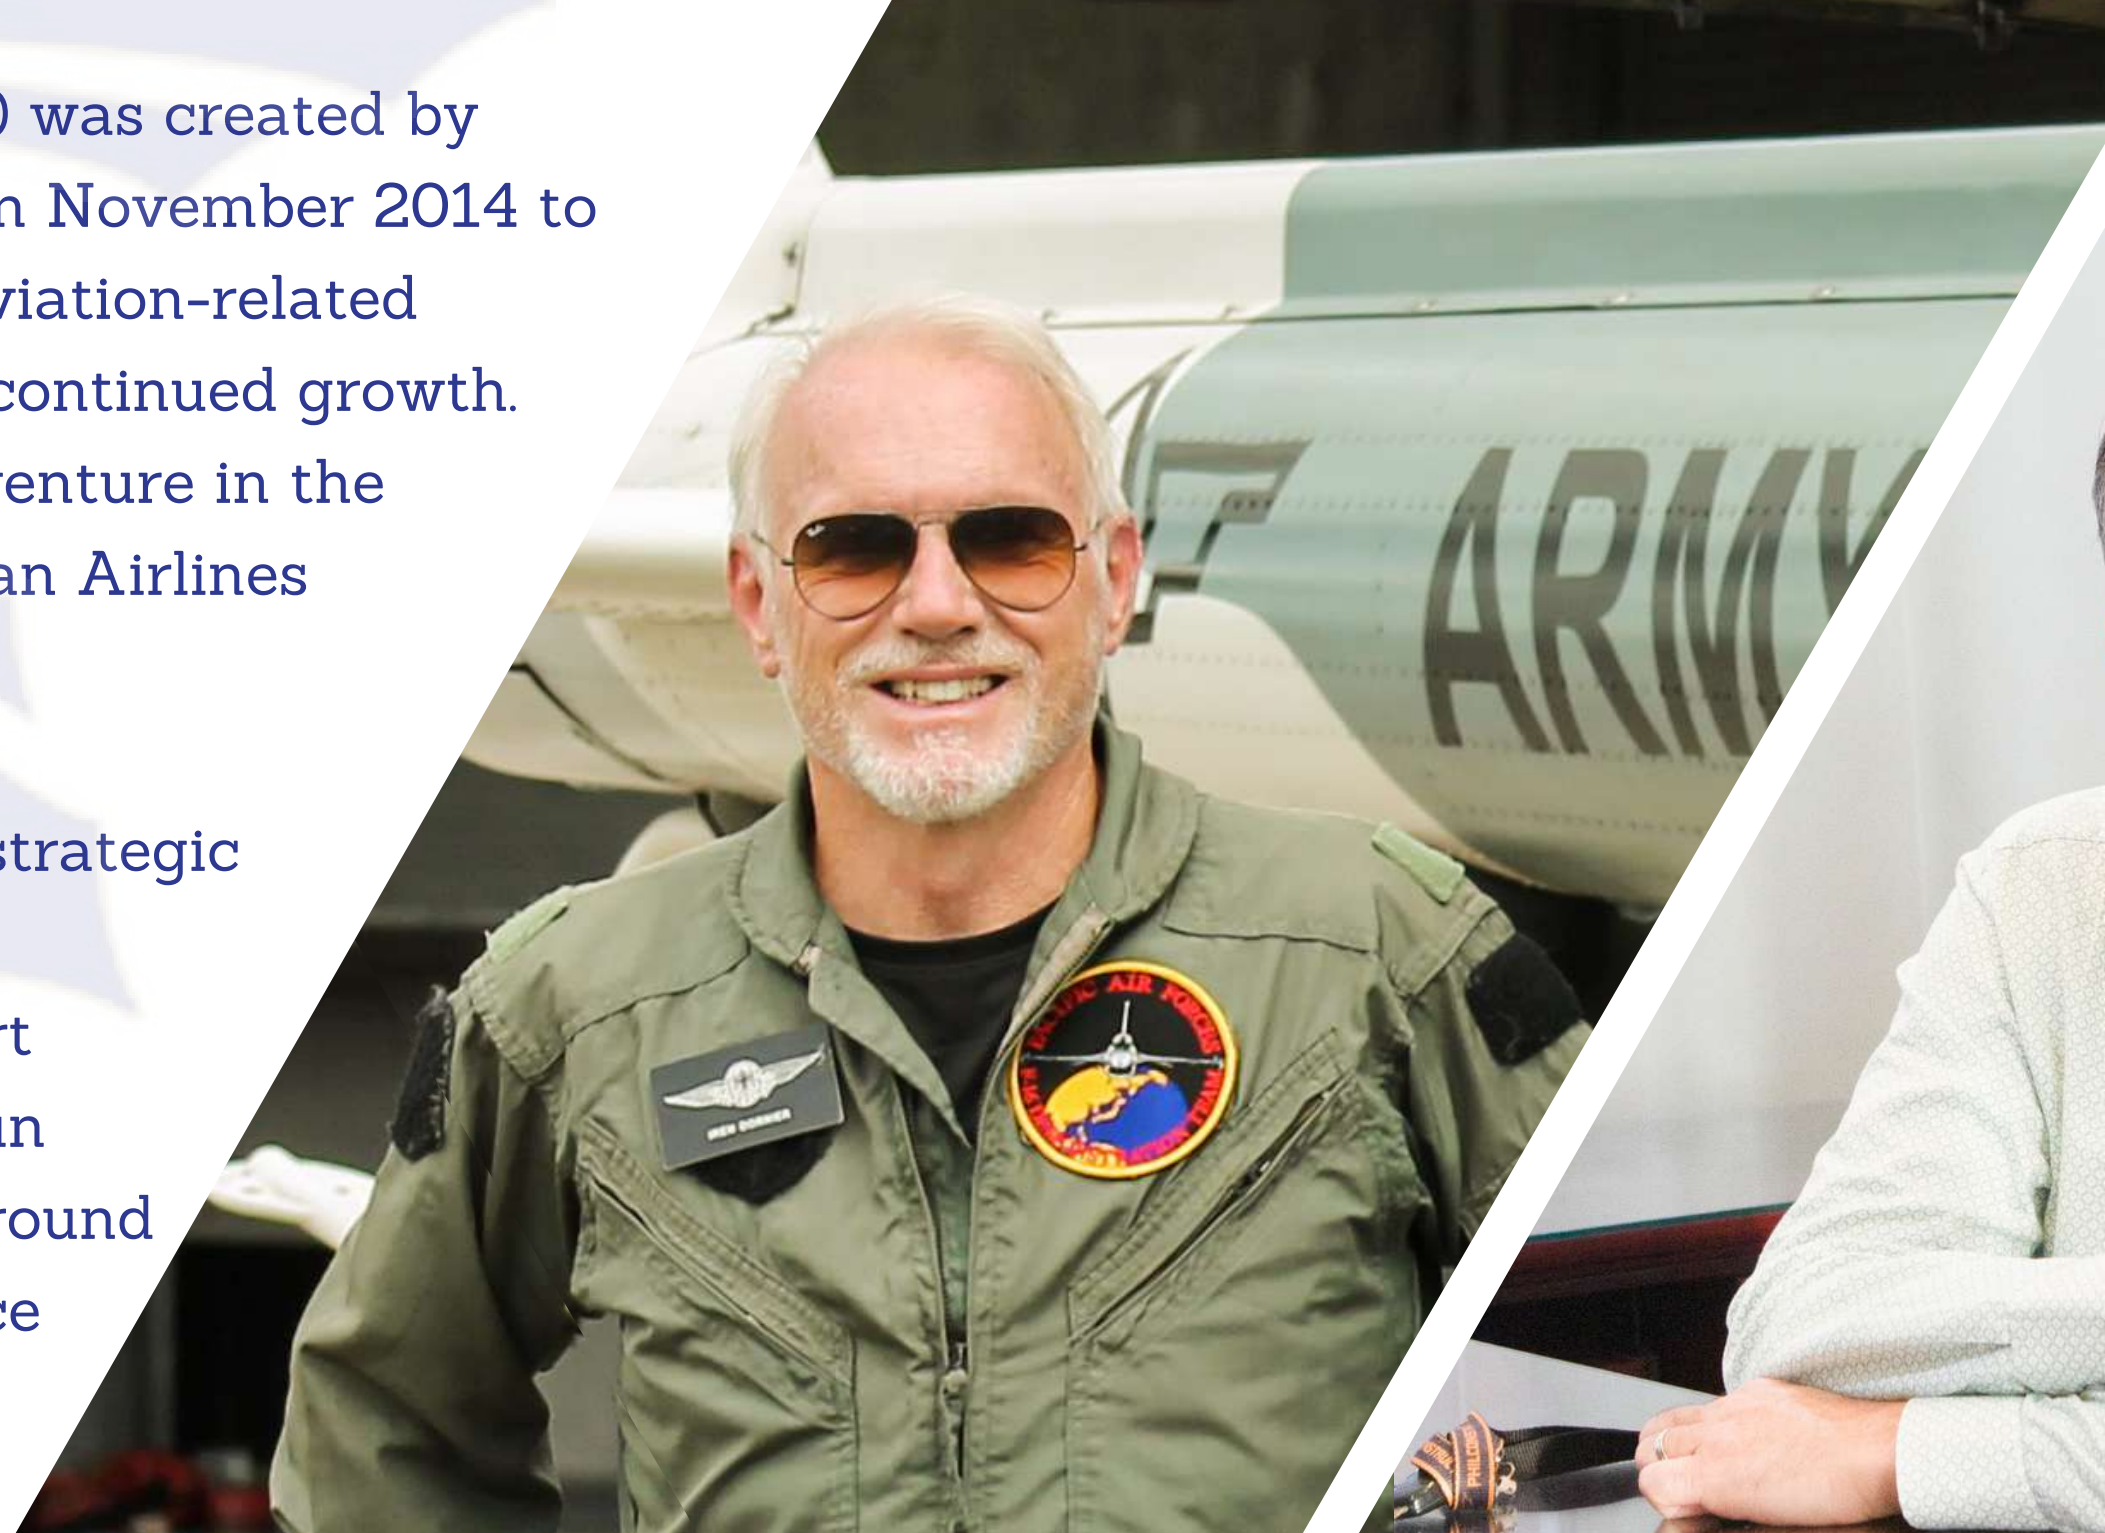

Dornier is engaged in Aircraft & Aircraft Systems Maintenance, Repair and Overhaul (MRO) services, which was privately operated until it entered into commercial MRO in 2013

Dornier is now a company dedicated to excellence. In pursuit of being the premier provider of comprehensive aviation solutions, the company offers a seamless experience through service tailored to suit each client's unique requirements.

World-class expertise from a famous lineage, setting aviation standards today and for years to come.

Integrated Airline Group (IAG) was created by Iren Dornier and Nikos Gitsis in November 2014 to consolidate and manage the aviation-related investments after 20 years of continued growth. Iren and Nick's first business venture in the Philippines was Southeast Asian Airlines (SEAIR) Inc founded in 1995.

IAG as part of the company's strategic growth, and in preparation for subsequent investment, support services of the airline were spun out into 4 major groups: the Ground Handling (TASSI), Maintenance MRO (Dornier Technology), General Support (AEI) & AOC (SEAIR Int'l).
